AZF8500Gの取扱説明書と調整が異なる部分を記載しています。

AZF8500Gの取扱説明書とあわせてご使用下さい。

Adjustments different with AZF8500G are mentioned in this book.

Read this book in combination with INSTRUCTIONS of AZF8500G.

取扱説明書は全て保管しておいて下さい。

安全にお使い頂くため、

最後までよくお読みになってからご使用下さい。

SAVE ALL INSTRUCTION MANUALS.

READ and UNDERSTAND

THOROUGHLY to OPERATE for SAFE USE.

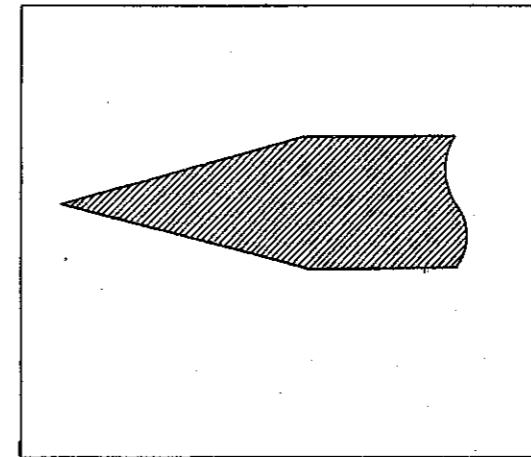

ヤマトミシン製造株式会社  
YAMATO SEWING MACHINE MFG. CO., LTD.

## 1 . Proper operation

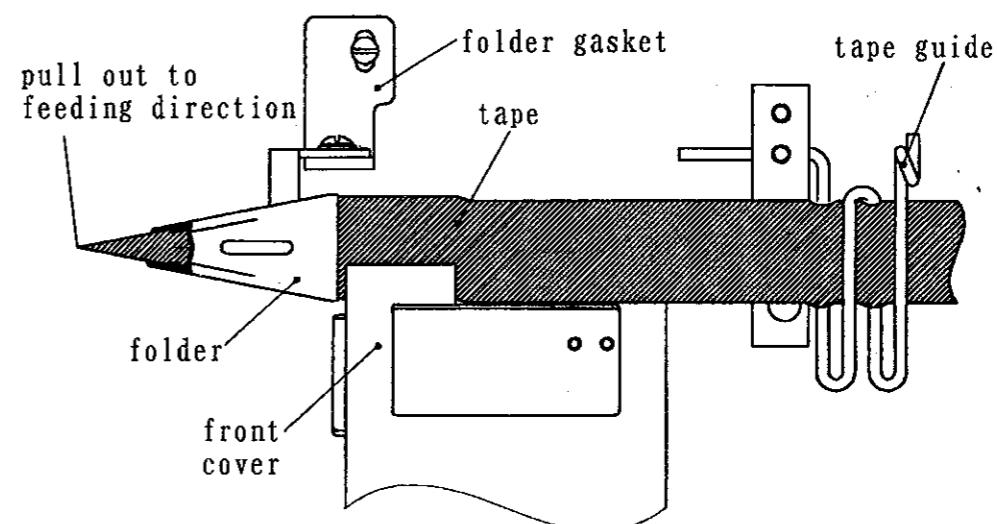

### 1-1 Setting of tape

\*Cutting the tip of tape as illustrated below makes easy to run the tape through folder.

1. Run the tape through folder after through the tape guide as shown below.
2. Pull out the end of tape to (machine's) feeding direction gently and get the tape folded in four underneath raised presser foot. Then, lower the presser foot.

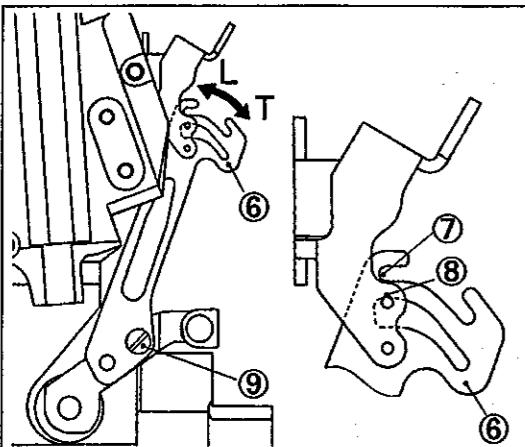

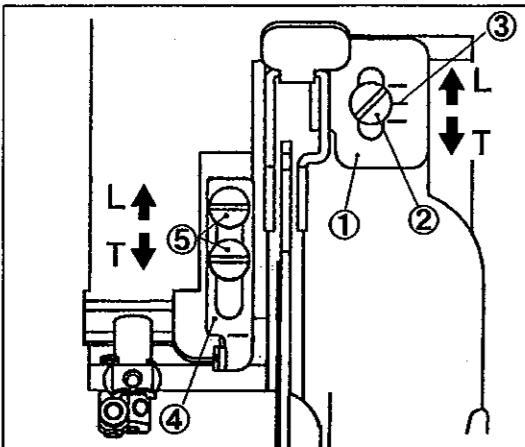

## 2 . Adjustment of sewing machine

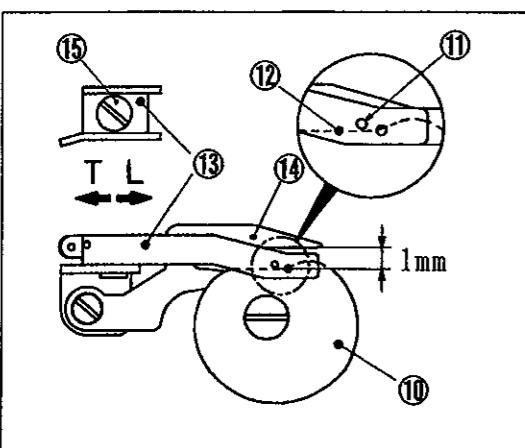

### **WARNING**

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 2-1 Needle thread tension for double chainstitch

#### 2-2 Looper thread tension for double chainstitch

- ★ At the standard position of needle thread eyelet ①, the notch mark ③ lines up to the center of screw ②.
- ★ Set double chainstitch needle thread eyelet (left) ④ to make needle thread being level with eyelet ④ at the top dead point of needle bar. To adjust it, loosen screw ⑤.
- ★ At the standard position of needle thread pull-off ⑥, its portion for thread pull-off ⑦ lines up to the eye ⑧ on eyelet (right), when the pull-off is forward completely. To adjust it, loosen screw ⑨.
- \* Moving needle thread eyelet and needle thread pull-off to the direction "T" tightens the needle thread tension and moving them to "L" loosens the tension.

## 2 . Adjustment of sewing machine

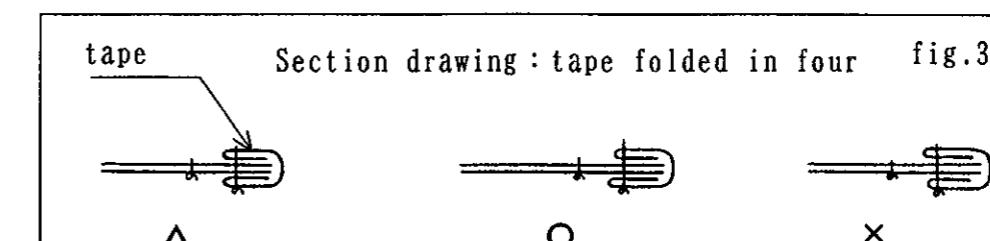

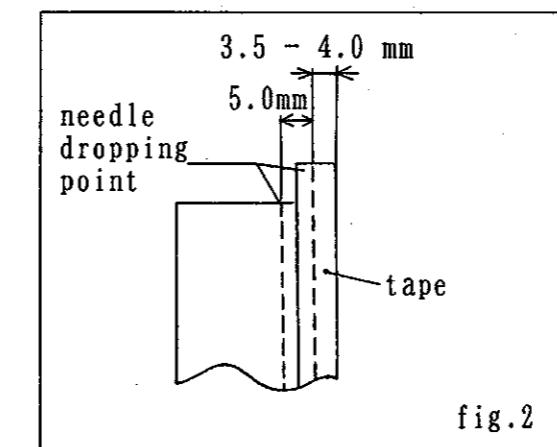

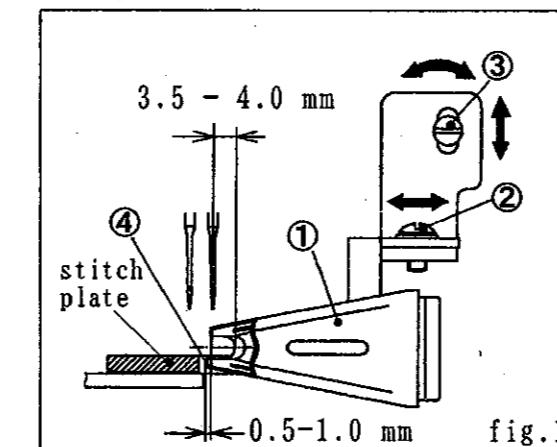

### **WARNING**

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 2-3 Adjustment of folder

- ★ The position for installing the folder is according to folding style and the tape width.
- ★ If the tape is folded uneven, make sure lower tape outlet ④ of folder ② is set lower than the surface of stitch plate.
- ★ Adjust the position of knife (=trimming width) according to finishing width of tape.

### How to adjust

- ★ Loosen screw ② and adjust the right and left position of folder.
- ★ Loosen screw ③ and adjust the up-and-down position and tilt in right and left of folder.
- ★ For up-and-down position, adjust folder ① so that its lower tape outlet ④ is set below the surface of stitch plate.
- ★ For the tilt, to obtain finish with the tape sewn wider on bottom (=narrower on top, See fig.3), adjust folder so that its lower tape outlet is set closer to stitch plate for 0.5 - 1.0 mm than upper outlet. For the adjustment, loosen screw ③ and tilt folder ① to left up direction.
- ★ For the right and left position, set folder ① to make the distance of 3.5-4.0 mm between the right needle and the inmost part of tape outlet of folder ①.

### NOTE for your reference...

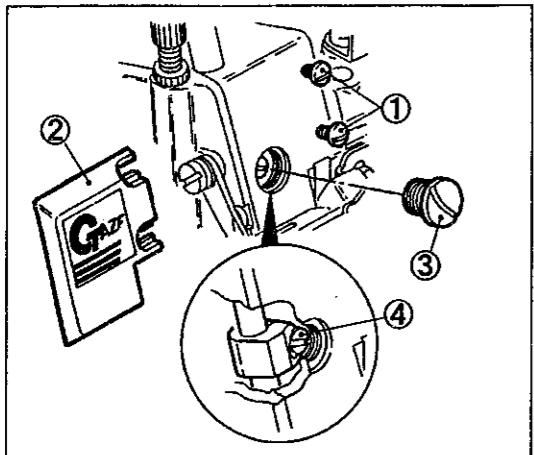

With the tape width 25 mm, right needle stitch is on the line 3.5 - 4.0 mm from the right edge at standard. See fig.2.

## 2 . Adjustment of sewing machine

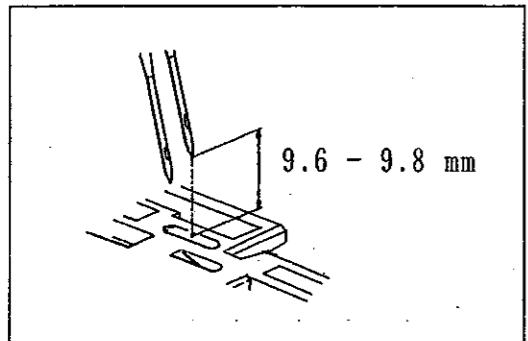

### WARNING

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 2-4 Adjustment of needle height

1. Loosen screws① and remove logo plate②.
2. Remove screw③.
3. Rotate machine pulley manually to position the needle bar at its top dead point.
4. Loosen screw④ and adjust the needle bar in up and down.

#### «AZR8920G class»

Set the needle height from the top surface of stitch plate to the tip of right needle to be 9.6 - 9.8 mm at the top of its stroke.

#### CAUTION

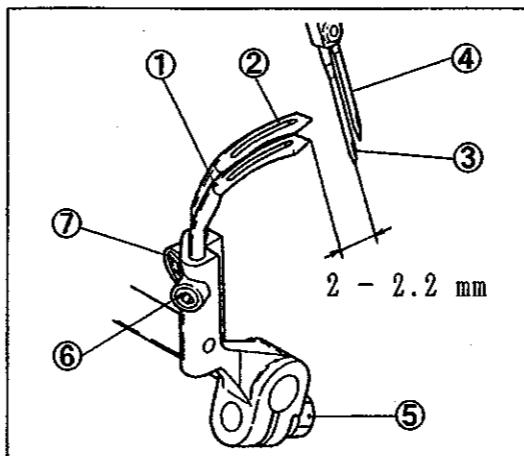

The tightening torque of screw on needle bar connecting bracket is 1.5 N·m(15kgf·cm).

## 2 . Adjustment of sewing machine

### WARNING

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 2-5 Needle and double chaining looper

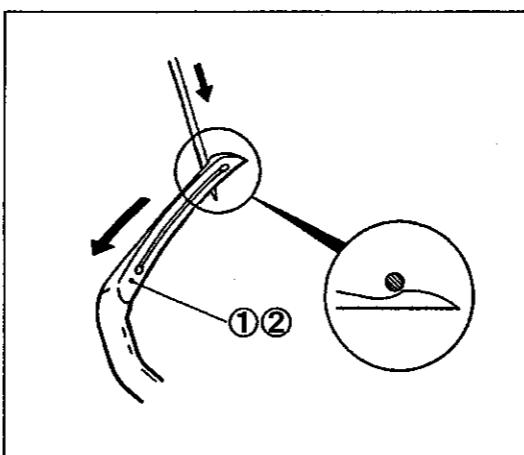

#### ★Timing

Insert double chaining loopers① and ② to looper holder and the height of them are fixed by their touching to the bottom of holder. Loosen screw⑤ and adjust looper① and ② to make the distance of 2.0 - 2.2 mm between the center of left double chaining needle③ and the tip of left looper① at the leftmost point of their stroke.

On this adjustment, tighten screws⑥ and ⑦ on loopers to fix looper① and ② temporarily with the angle approximately 2° , and adjust the distance between needles and loopers① and ② with adjusting the longitudinal position of the tip of loopers and needles.

The position of right double chaining looper① is set automatically according to the distance between needle and left double chaining looper②.

#### ★Longitudinal position

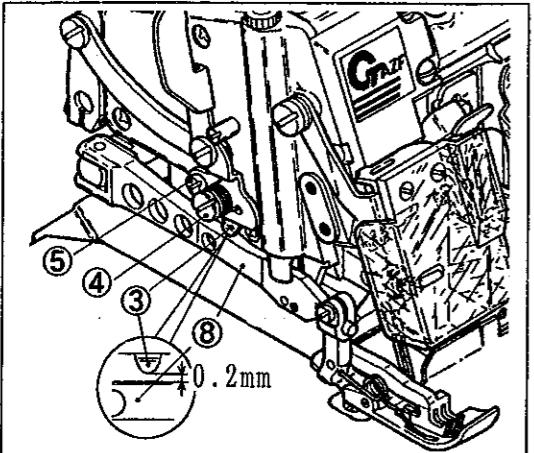

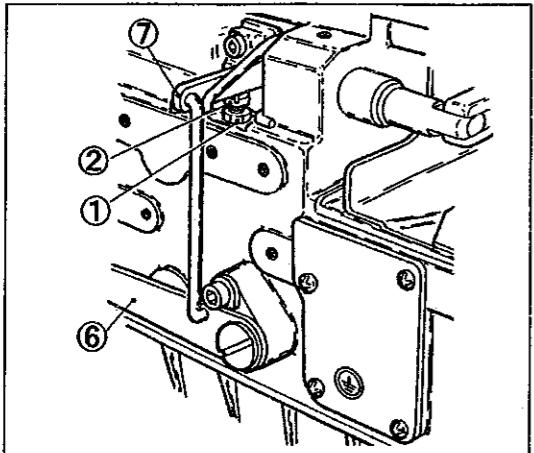

The tips of loopers① and ② pass behind of needles as closely as possible without contact. The loopers pass in front of needles as contact slightly with their curved portions on the ways of loopers right to left.

## 2 . Adjustment of sewing machine

### WARNING

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 2-6 Adjustment of lifting amount of presser foot

For AZR8920G, maximum lifting amount of presser foot is 3.5 mm.

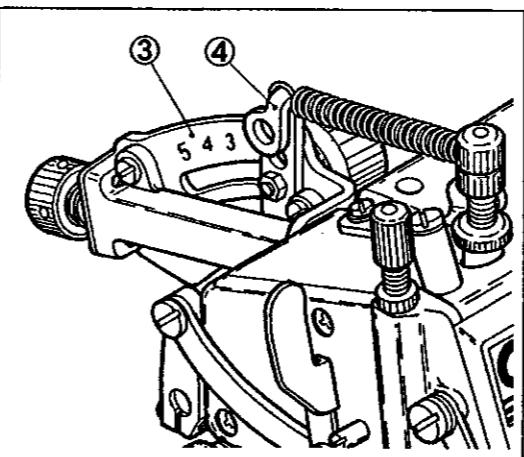

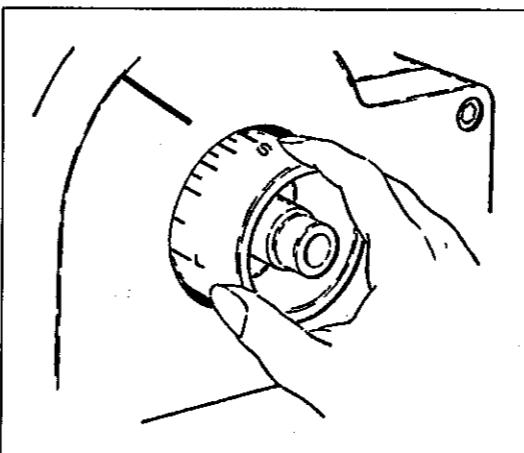

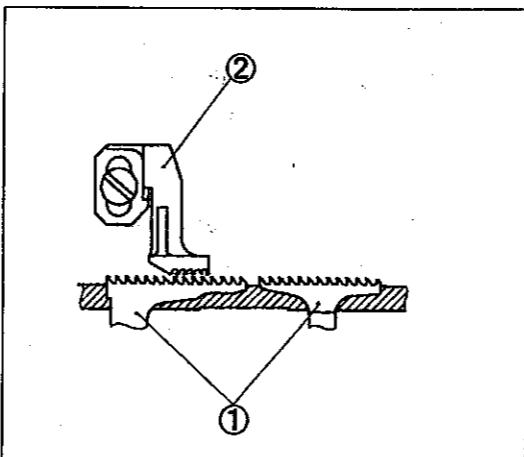

1. Loosen lock nut① and rotate screw② clockwise.
2. Loosen screws④ and ⑤ on stopper③ of presser foot arm.
3. Push down presser foot lever⑥ and make bottom surface of presser foot to be in parallel with the stitch plate and to be 3.5 mm above the top surface of stitch plate.
4. With presser foot is lifted up 3.5 mm, rotate screw② counterclockwise until its top surface contacts presser foot shaft lever⑦.
5. Tighten lock nut①.
6. With presser foot is lifted up 3.5 mm, make the clearance of 0.2 mm between presser foot arm⑧ and stopper③.
7. Tighten screws④ and ⑤ on presser foot arm stopper③.

## 3 . Adjustment of top feeding

### WARNING

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 3-1 Adjustment of top feeding amount against lower feed

For AZR8920G, top feed and lower feed drives separately. See the following points.

- ★ When the feeding amount of lower feed (stitch length) is changed, the feeding amount of top feed has to be changed accordingly.
- ★ The standard ratio of lower feeding to the top feeding is 1 : 1.
- ★ The actual feeding amount of top feed② is twice of the number indicated on top feed graduation③.
- ★ When the graduation of pulley is at "2" (stitch length : 2mm), set the top feed lever④ at "1" on top feed graduation③.

\*Maximum top feeding amount : 7.0 mm.

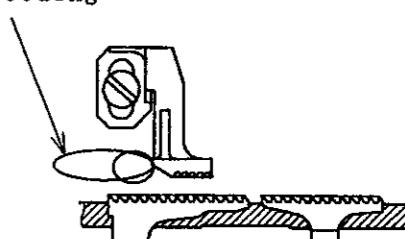

### CAUTION

According to the material to be sewn, change the position of top feed lever④ slightly.

### CAUTION

Increasing top feeding amount makes locus of top feed to be extended backward without changing the front point of top feed.

locus of top feeding

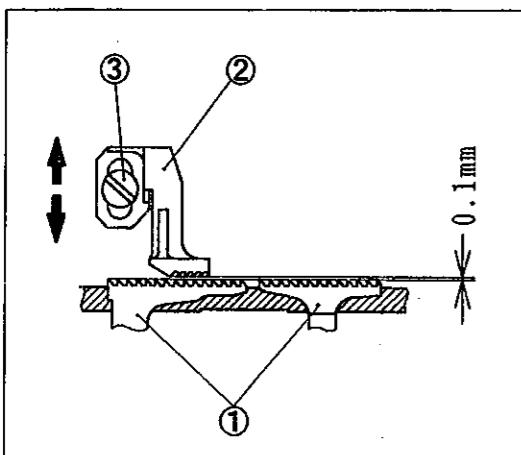

### 3 . Adjustment of top feeding

#### **WARNING**

ALWAYS turn OFF the motor switch and check that the motor stops before the work.

#### 3-2 Adjustment of clearance between top feed dog and lower feed dog

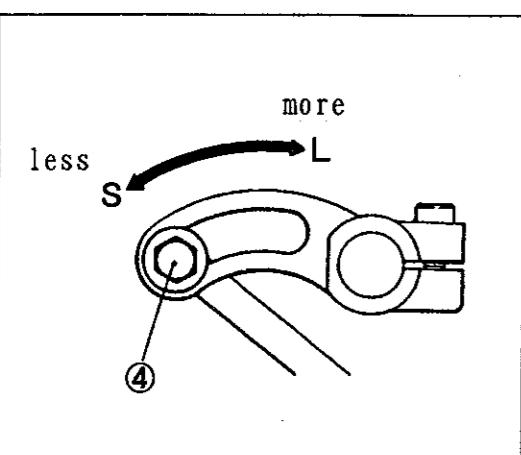

Stable feeding can be obtained by adjusting the height of top feed dog according to the application, type and weight of fabric to be sewn.

The clearance between the top feed dog and the lower feed dog should be 0.1 mm when the top feed is at bottom dead point and the lower feed is at top dead point.

For adjustment, loosen screw③.

#### 3-3 Adjustment of up and down movement of top feed dog

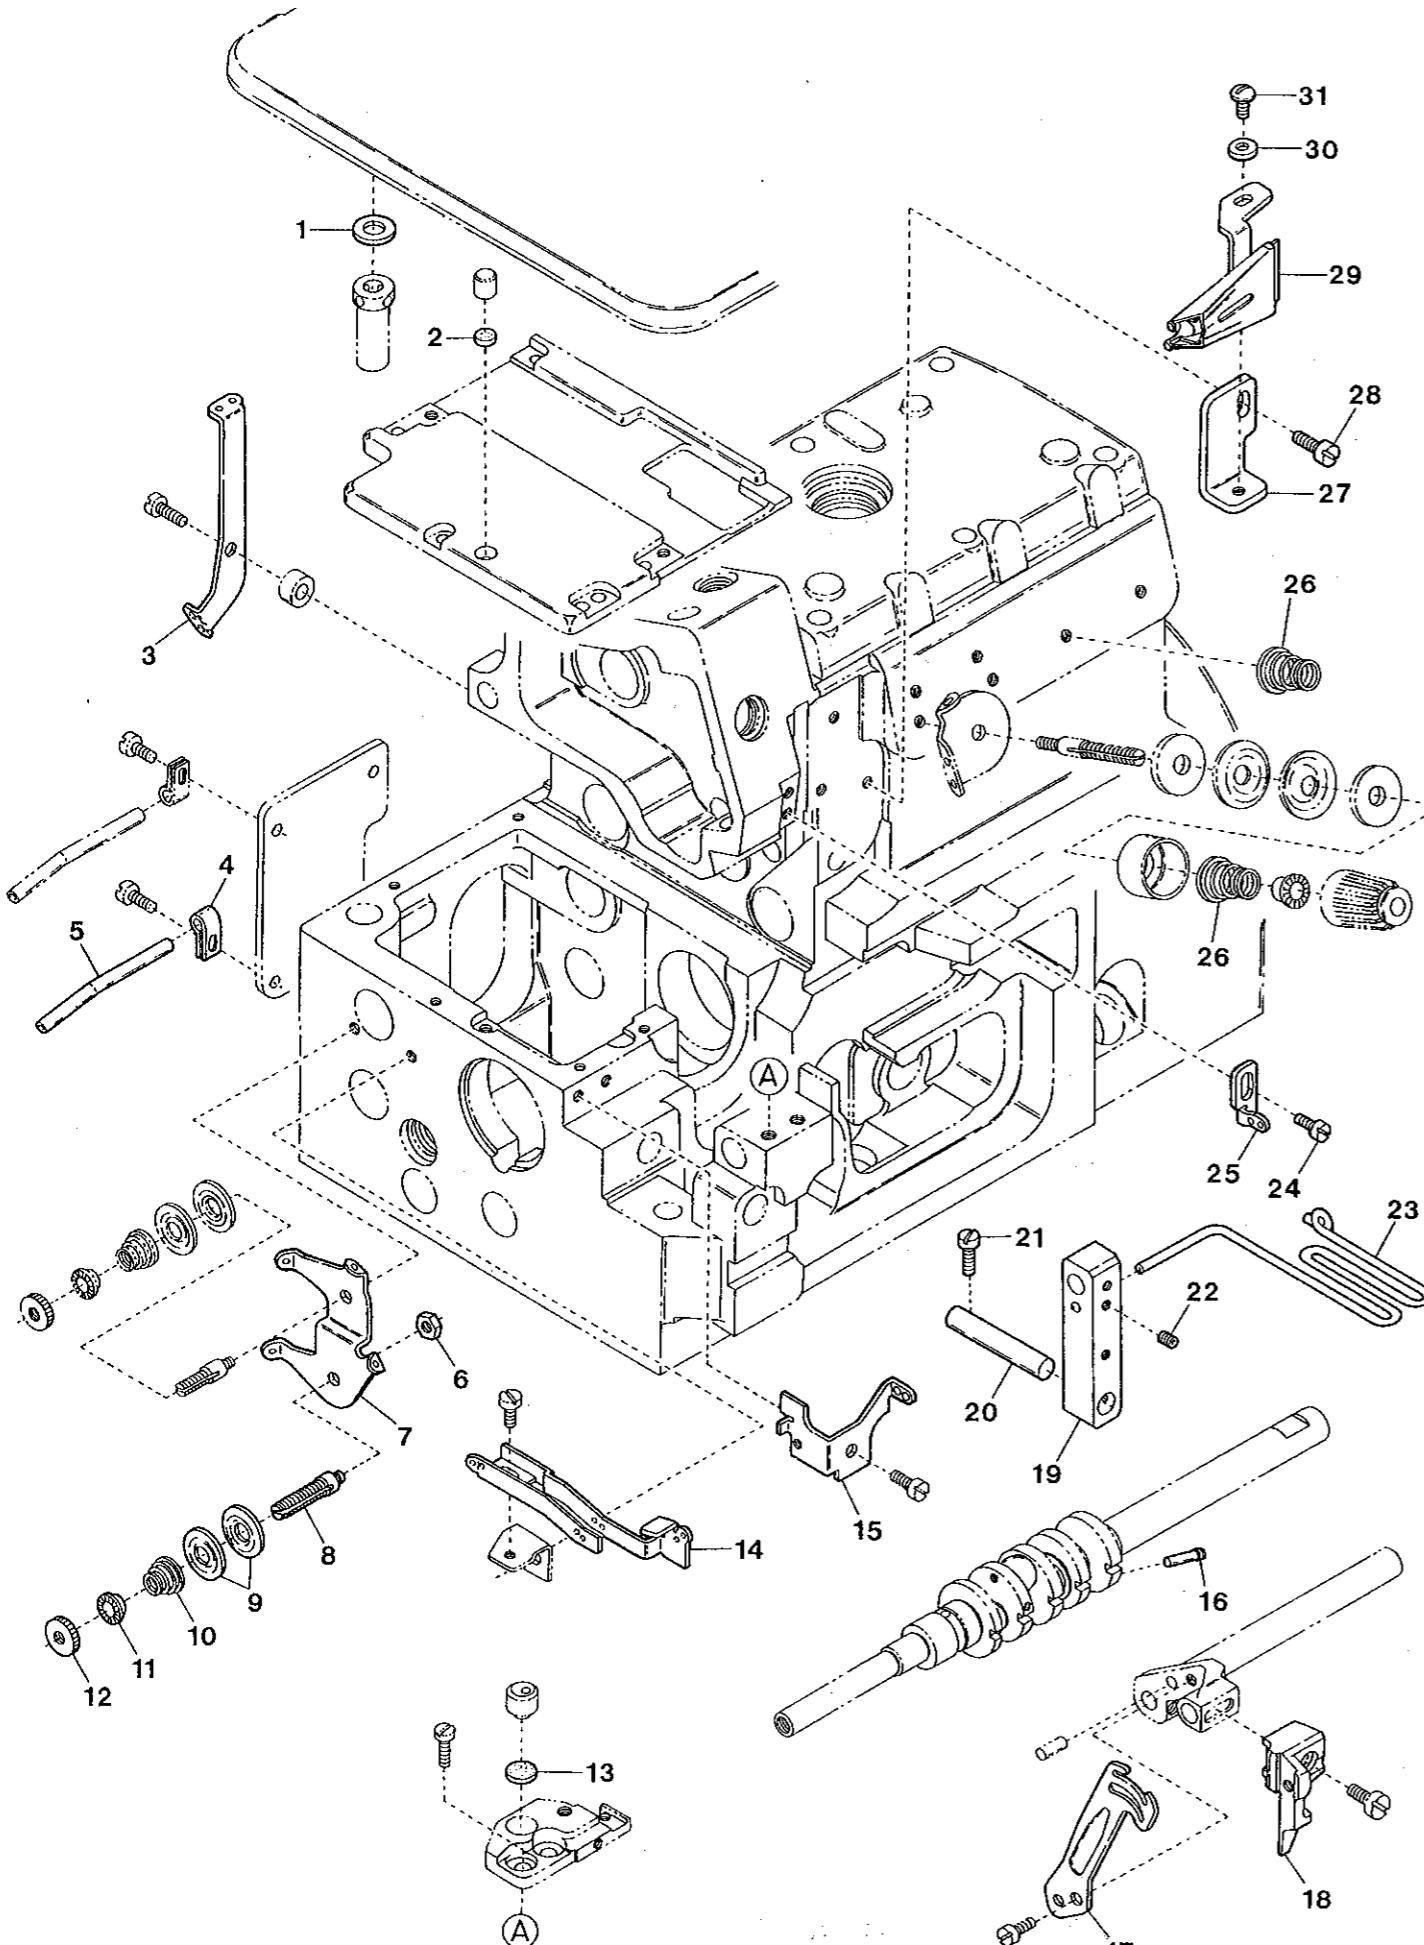

Up and down movement of top feed dog can be adjusted from 3.5 mm to 6.0 mm.

For adjustment, remove top cover, loosen screw④ and moving it to the direction "L" increases the moving amount and to the direction "S" decreases it.

### 4 . Specifications

Model	AZR8920G-CDF
Dimensions	380(L) × 245(W) × 310(H) mm
Weight	28kg
Construction	Dust-proof, Oil-tight and Completely Sealed
Stitch Type	ISO(401·401)
Application	Piping Operation of pockets with woven fabrics
Sewing Speed	6,500 r.p.m.
Stitch Length	1.0 - 4.0 mm 6.5 - 25 stitches per inch 7.5 - 30 stitches per 30 mm
Sharpest Curve to be sewn	45R
Sewing Width	25 mm of tape width → 10 mm (standard) 30 mm of tape width → 12.5 mm (optional)
Needle Distance	5 mm
Needle System	DC×27, Size 65 - 90 (#9 - #14)
Needle Stroke	25.7 mm
Presser Foot Lift	3.5 mm (max.)
Adjustment of Stitch Length	Push Button System
Differential Ratio	Normal Differential (Gathering) 1 : 2.3 Reverse Differential (Stretching) 1 : 0.7
Adjustment of Differential Ratio	• Adjustment during the rotation is also available by lifting and lowering lever. • Differential feed can be easily and quickly adjusted by Lever or Micro-Adjuster.
Feeding Amount of Top Feed Dog	7.0 mm
Basis of Top Feed Movement	Front of Locus
Up and Down Movement of Top Feed Dog	3.5 - 6.0 mm
Lifting Amount of Top Feed Dog	7.0 - 7.5 mm
Knives for Cutting Fabric	Lower Knife : Flat Type, made of Special Steel Upper Knife : Flat Type, made of Super Hard Alloy
Lubrication Oil	YAMATO SF OIL No.28
Capacity of Oil Reservoir	900CC
Lubrication	Automatic Lubrication System Forced fed by Gear Pump in combination with Splash Lubrication
Installation	Table Top Type Fully-submerged type / Semi-submerged type
